Education	2002 MD, Seoul National University, college of medicine 2010 PhD, Seoul National University, college of medicine 2010–2016 Post-doctoral fellow, University of Minnesota 2016– Assistant professor, POSTECH	
Major Career (less than 5 items)	2003–2007 Resident in Pathology, Seoul National University Hospital 2011–2014 Irvington Fellowship of Cancer Research Institute, USA 2015 NIH Pathway to Independence Award (K99 AI114884), USA 2019 POSCO Science Fellowship, TJ Park Foundation, Korea	
Biography		
<p>You Jeong Lee has worked on the development and function of innate T cells such as NKT, MAIT and gamma delta T cells in mice and humans. Especially, he focused how the repertoire of these cells are selected and their lineage differentiation is regulated in the thymus. Recently he published paper which analyzed the developmental landscape of all three types of innate T cells at the single cell level at Nature Communications. In the future, he is interested in further analyzing factors determining TCR repertoire of innate T cells and role of these cells in IgE mediated immune disorders.</p>
